

Gasp! We are nude!

At Elevate Super we are proud nudists! Because we think it is important for you to know where your money is invested, we are pleased to publicly bare all and disclose the following list of companies that the Elevate Growth and Balanced portfolios are exposed to.

Before you read on, you should know that in constructing Elevate Super's portfolio, investments are assessed on fundamental financial analysis and an analysis of how it scores in relation to [Sustainable Development Goals \(SDGs\)](#) contribution (both positive and negative), plus carbon risk.

We also monitor the % of portfolio which align with the various climate change scenarios.

Elevate Super's portfolios are constructed in a pragmatic manner, aligned with an intention to assist in the global transition to greater economic, social and environmental sustainability plus resource efficiency.

Sustainability Scores

Elevate Super targets to achieve a higher SDG Score and lower Carbon Risk exposure than the market, with this improving over time. Both scores are calculated using independently assessed data from Sustainable Platform.

SDG Score

Based on net SDG score provided by Sustainable Platform (data as of 30 June 2021) assessed on the proportion of revenue (plus R&D spent) of a listed company that contributes to, or detracts from, one or more of the SDGs. Each underlying listed company's SDG score is weighted by its portfolio holding percentage to calculate the portfolio SDG score (out of 100). Data available for ~98% of the underlying listed companies.

+ Based on underlying listed equities investment exposure only (where data is available)

^ Proxy based on the largest 1200 companies listed on developed stock market exchanges by market capitalisation.

* Proxy based on the largest 200 companies listed on the ASX by market capitalisation.

Carbon Risk Analysis

Carbon Risk Analysis provided by Sustainable Platform (data as of 30 June 2021). The analysis combines fossil fuel exposure data (by type of fossil fuel) with the Bank of England climate stress test tool modelling to give alignments of portfolios to the Paris Agreement. Fossil fuel exposure is expressed as a % in terms of the revenue derived from fossil fuels compared with the total revenue of the whole portfolio being analysed, as well as taking into account operating exposure to products that create carbon emissions.

+ Based on underlying listed equities investment exposure only (where data is available)

^ Proxy based on the largest 1200 companies listed on developed stock market exchanges by market capitalisation.

* Proxy based on the largest 200 companies listed on the ASX by market capitalisation.

Hungry for more?

If you're interested to know more about how we invest and the SDG scores, please go to www.elevatesuper.com.au/super.

Portfolio Exposure (for underlying listed equities)
